REPORT FROM THE COMMISSION

Slovenia

**Report prepared in accordance with Article 126(3) of the Treaty on the Functioning of
the European Union**

REPORT FROM THE COMMISSION

Slovenia

Report prepared in accordance with Article 126(3) of the Treaty on the Functioning of the European Union

1. INTRODUCTION

On 20 March 2020, the Commission adopted a Communication on the activation of the general escape clause of the Stability and Growth Pact. The clause, as set out in Articles 5(1), 6(3), 9(1) and 10(3) of Regulation (EC) 1466/97 and Articles 3(5) and 5(2) of Regulation (EC) 1467/97, facilitates the coordination of budgetary policies in times of severe economic downturn. In its Communication, the Commission shared with the Council its view that, given the expected severe economic downturn resulting from the COVID-19 outbreak, the current conditions permit activation of the clause. On 23 March 2020, the Ministers of Finance of the Member States agreed with the assessment of the Commission. The activation of the general escape clause allows for a temporary departure from the adjustment path towards the medium-term budgetary objective, provided that this does not endanger fiscal sustainability in the medium term. For the corrective arm, the Council may also decide, on a recommendation from the Commission, to adopt a revised fiscal trajectory. The general escape clause does not suspend the procedures of the Stability and Growth Pact. It allows Member States to depart from the budgetary requirements that would normally apply while enabling the Commission and the Council to undertake the necessary policy coordination measures within the framework of the Pact.

Data notified by the Slovenian authorities on 31 March 2020 and subsequently validated by Eurostat¹ show that the general government surplus in Slovenia reached 0.5% of GDP in 2019, while the general government gross debt stood at 66.1% of GDP. According to the 2020 Stability Programme, Slovenia plans a deficit of 8.1% of GDP in 2020, while debt is planned at 82.4% of GDP.

The planned deficit for 2020 provides *prima facie* evidence of the existence of an excessive deficit as defined by the Stability and Growth Pact.

Against this background, the Commission has therefore prepared this report, which analyses Slovenia's compliance with the deficit and debt criteria of the Treaty. It takes into account all relevant factors and gives due consideration to the major economic shock linked to the COVID-19 pandemic.

2. DEFICIT CRITERION

Based on the 2020 Stability Programme, Slovenia's general government deficit in 2020 is planned to reach 8.1% of GDP, above and not close to the Treaty reference value of 3% of GDP. The increase in deficit reflects the planned stimulus of 4.4% of GDP and the effects of the economic contraction.

The planned excess over the Treaty reference value in 2020 is exceptional, as it results from a severe economic downturn. Taking into account the impact of the COVID-19 pandemic, the Commission 2020 spring forecast projects a contraction of real GDP growth in 2020 by 7.0%.

The planned excess over the Treaty reference value would be temporary, based on the Commission 2020 spring forecast, which projects the general government deficit to fall under 3% of GDP in 2021. However, those projections are surrounded by an exceptionally high degree of uncertainty.

In sum, the planned deficit for 2020 is above and not close to the 3% of GDP Treaty reference value. The planned excess is considered to be exceptional as defined by the Treaty and the Stability and Growth Pact, while the nature of the excess is currently considered temporary. Hence, the analysis suggests that *prima facie* the deficit criterion as defined by the Treaty and Regulation (EC) No 1467/97 is not fulfilled.

3. DEBT CRITERION

The government debt-to-GDP ratio decreased from 70.4% of GDP in 2018 to 66.1% of GDP in 2019. The decline of the ratio was mainly driven by the primary surplus, the denominator effect from increasing nominal GDP and the negative stock-flow adjustments.

The notified data show that Slovenia complied with the debt reduction benchmark in 2019, as the gap to the benchmark is 6.8% of GDP.

The analysis thus suggests that the debt criterion is fulfilled based on the 2019 outturn data.

4. RELEVANT FACTORS

Article 126(3) of the Treaty provides that, if a Member State does not fulfil the requirements under one or both of those criteria, the Commission has to prepare a report. That report must also “take into account whether the government deficit exceeds government investment expenditure and take into account all other relevant factors, including the medium-term economic and budgetary position of the Member State”.

Those factors are further clarified in Article 2(3) of Regulation (EC) No 1467/97, which also provides that “any other factors which, in the opinion of the Member State concerned, are relevant in order to comprehensively assess compliance with the deficit and debt criteria and which the Member State has put forward to the Council and to the Commission” need to be given due consideration.

As specified in Article 2(4) of Regulation (EC) No 1467/97, as regards compliance with the deficit criterion in 2020, since the government debt-to-GDP ratio exceeds the 60% reference value and the double condition is not met – i.e. that the deficit remains close to the reference value and that its excess over the reference value is temporary – those relevant factors cannot be taken into account in the steps leading to the decision on the existence of an excessive deficit on the basis of the deficit criterion for Slovenia.

In the current situation, a key additional factor to take into consideration regarding 2020 is the economic impact of the COVID-19 pandemic, which has a very substantial impact on the budgetary situation and results in a highly uncertain outlook. The pandemic has also led to the activation of the general escape clause.

4.1. COVID-19 pandemic

The COVID-19 pandemic has led to a major economic shock that is having a significant negative impact throughout the European Union. The consequences for GDP growth will depend on the duration of both the pandemic and of the measures taken by national authorities and at European and global level to slow its spread, protect production capacities and support aggregate demand. Member States have already adopted or are adopting budgetary measures to increase the capacity of health systems and provide relief to those individuals and sectors that are particularly affected. Significant liquidity support measures and other guarantees have also been adopted. Subject to more detailed information, the competent statistical authorities are to examine whether those measures entail an immediate impact on the general government balance or not. Together with the fall in economic activity, those measures will contribute to substantially higher government deficit and debt positions.

4.2 Medium-term economic position

Slovenia’s economy grew by 2.4% in 2019. Employment continued to grow unabated and unemployment reached a very low rate of 4.0% in the final quarter. Despite growth moderating in the end of the year, Slovenia entered this crisis in a relatively strong position.

In 2020, the economy is expected to contract by about 7% based on the Commission 2020 spring forecast. Economic activity is expected to rebound in the second half of 2020, benefiting from the strong policy measures adopted to shore up employment and to cushion income falls for households and enterprises affected during the downturn. In 2021, growth is projected to reach 6.7%. The near-term outlook includes exceptional degree of uncertainty

regarding the duration of the pandemic as well as its economic impact. This is a mitigating factor in the assessment of Slovenia's compliance with the deficit criterion in 2020.

4.3 Medium-term budgetary position

The headline surplus decreased from 0.7% of GDP in 2018 to 0.5% of GDP in 2019.

On 13 July 2018, Slovenia was recommended to ensure that the nominal growth rate of primary government expenditure, net of discretionary revenue measures and one-offs, did not exceed 3.1% in 2019 ('the expenditure benchmark'), corresponding to a structural adjustment of 0.65% of GDP². The overall assessment points to significant deviation from the recommended adjustment path towards the medium-term budgetary objective in 2019 and over 2018-2019 taken together.

The Stability Programme provides information on substantial measures to contain the pandemic and to support the economy. It estimates the budgetary impact of those direct support measures at 4.4% of GDP in 2020.

The fiscal projections in the Commission 2020 spring forecast and the 2020 Stability Programme are subject to a high degree of uncertainty.

4.4. Medium-term government debt position

According to the Commission 2020 spring forecast, general government debt is expected to rise from 66.1% of GDP in 2019 to 83.7% of GDP in 2020.

The debt sustainability analysis has been updated with the Commission 2020 spring forecast. That analysis confirms that, notwithstanding risks, the debt position remains sustainable over the medium-term in Slovenia, which takes account of important mitigating factors (including the debt profile and the historically low level of interest rates). In particular, while the government debt position has deteriorated as a result of the COVID-19 crisis, the debt-to-GDP ratio in the baseline is expected to be on a sustainable (declining) trajectory over the medium term³.

² Council Recommendation of 13 July 2018 on the 2018 National Reform Programme of Slovenia and delivering a Council opinion on the 2018 Stability Programme of Slovenia (OJ C 320, 10.9.2018, p. 103).

³ The baseline is based on the Commission Spring 2020 forecast. Beyond 2021, a gradual adjustment of fiscal policy is assumed, consistent with the EU economic and fiscal coordination and surveillance frameworks. Real GDP growth is projected according to the so-called EPC/OGWG T+10 methodology. In particular, (real) actual GDP growth is driven by its potential growth and affected by any additional fiscal adjustment considered (through the fiscal multiplier). Inflation is assumed to converge gradually to 2%. Interest rates assumptions are set in line with financial market expectations. Under the adverse scenario, higher interest rates (by 500 bps.) and lower GDP growth (by -0.5 pp.), with respect to the baseline, are assumed (throughout the projection horizon).

4.5 Other factors put forward by the Member State

On 12 May 2020, the Slovenian authorities transmitted a letter with relevant factors in accordance with Article 2(3) of Regulation (EC) No 1467/97. The analysis presented in the previous sections already covers the key factors put forward by the authorities.

5. CONCLUSIONS

According to the 2020 Stability Programme, Slovenia's general government deficit in 2020 is planned to reach 8.1% of GDP, above and not close to the 3% of GDP Treaty reference value. The planned excess over the reference value is considered to be exceptional and currently considered to be temporary.

The general government gross debt stood at 66.1% of GDP at the end of 2019, above the 60% of GDP Treaty reference value. Slovenia complied with the debt reduction benchmark in 2019.

In line with the Treaty and the Stability and Growth Pact, this report also examined relevant factors.

As specified in Article 2(4) of Regulation (EC) No 1467/97, as regards compliance with the deficit criterion in 2020, however, since the government debt-to-GDP ratio exceeds the 60% reference value and the double condition is not met - i.e. that the deficit remains close to the reference value and that its excess over the reference value is temporary - those relevant factors cannot be taken into account in the steps leading to the decision on the existence of an excessive deficit on the basis of the deficit criterion for Slovenia.

Overall, the analysis suggests that the deficit criterion as defined in the Treaty and in Regulation (EC) No 1467/1997 is not fulfilled.
