Flag Status: Flagged

Dear Sirs,

I have the following questions to Europol:

- a) Does Europol use software to recognize faces in video recordings?
- b) Who provides the software and what is its name?
- c) What is the rate of false positives and false negatives of this software?
- d) How many people (targets) were sought in this way in 2018, and how many of those people were matched?
- e) What video material has the software been used on?

Yours sincerely
Patrick Breyer
